Class – IV, Subject – Science, Chapter – 1

THINGS TO REMEMBER

- Photosynthesis is the process of making food by green leaves in the presence of the sunlight with the help of carbon dioxide and water. Oxygen is given out and glucose is formed as food.
- Green plants have chlorophyll in them so they can make their own food.
- A leaf has a main vein and side veins to transport food and water.
- Starch gives blue black colour with iodine.
- Energy flows from sun to plants and then to animals and human beings.
- Plants and animals are interdependent on each other.

Fill in the blanks:

1. Leaves are green because of _____.
2. During photosynthesis _____ gas is given out.
3. Starch with iodine solution gives _____ colour.
4. _____ is the process of making food in plants.
5. The food made by plant is called _____.
6. A leaf has _____ to transport food and water.
7. _____ gas is used during photosynthesis.
